EDUCATION

Georgia Institute of Technology

Atlanta, GA

Bachelor of Science in Computer Science, GPA: 3.9/4.0

May 2027

- **Related Coursework:** Data Structures & Algorithms, Databases & SQL, Algorithm Design & Computational Complexity, Computer Architecture & Programming, Software Design & UML, Object-Oriented Programming, Computing in Python, Discrete Mathematics, Linear Algebra

EXPERIENCE

Bits of Good

Atlanta, GA

Software Developer

Jan. 2025 – Present

- Accelerated new feature development by **25%** by migrating the backend from raw MongoDB to Mongoose, **refactoring 10 services and 23 API endpoints** to enforce type safety and improve long-term code maintainability.
- Engineered medication management system with schema-based validation using Next.js, TailwindCSS, and Zod.
- Developed a **secure, token-based password reset system** using Node.js and Mongoose with mailing integration.

Technique Newspaper

Atlanta, GA

Software Developer

Nov. 2024 – Present

- **Slashed page load time by 8000ms** by deploying headless Next.js front-end for Georgia Tech's student newspaper.
- **Reduced backend load and cut API call redundancy by 55%** by engineering a custom service wrapper that used an aggressive caching strategy for the WordPress REST API.

Personality Academy

Remote

Co-Founder

Sept. 2022 – Aug. 2024

- Co-founded and **scaled an educational platform to over 3,000 users** by developing a full-stack application with Next.js, Supabase, and Prisma; implemented course delivery and a secure donation system via Stripe.
- Architected and built 'TypeSearch,' a **complex query tool for a database of 2,000+ individuals**, featuring multi-filter search logic and dynamic data visualization for 512 unique types.

PROJECTS

DataFly CLI - SQL Data Generation | GoLang, Cobra, SQL, LangChain, BubbleTea, Git

[GitHub](#)

- Enabled developers to test environments in **under 2 minutes, reducing setup overhead by 85%**.
- **Implemented relationally-aware generation**, keeping foreign key integrity across elaborate relational entities.
- Engineered a schema analysis pipeline using LangChain's dynamic prompt templating to **convert complex SQL schemas into YAML + Go-based faker files**, accessible to **10+ SQL dialects**.
- Ensuring **instant post-generation app usability** with automated test credentials via intelligent schema scanning.
- **Cut runtime latency by 30% with LangChain's chaining** to update, analysis, and generate without re-processing.

Dementia Agitation Network | TypeScript, Python, React Native, Flask, Firebase, Spotify API, Expo, Git

[GitHub](#)

- **Secured \$1,000 in funding and won the 'Instructional Choice Award'** in a competitive 50-team showcase by pitching the project's market viability to investors and faculty.
- Processed **real-time data from WHOOP to Firebase** for continuous monitoring of patient biometrics.
- Implemented agitation detection in Python that analyzed 5 biometric signals from WHOOP, **achieving 90% predictive accuracy**, automatically triggering music interventions via the Spotify API.

Check-In - Automated Attendance | JavaScript, Next.js, PostgreSQL, Prisma, Recharts.js, Vercel, Git

[Website](#) | [GitHub](#)

- **Served over 1,000 students across 15+ organizations and reducing event check-in times by over 40 minutes.**
- **Awarded 1st Place in the Congressional App Challenge (2022) over 2,000+ competing teams** nationwide.
- Developed a real-time analytics dashboard, featuring customizable data visualization and CSV export functionality, which **drove 100% adoption by administrators across Poudre School District.**

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, HTML/CSS, Java, SQL, C#, GoLang, PHP, C++ , C, Assembly

Libraries: Pandas, NumPy, Matplotlib, TensorFlow, Axios, Zod, D3.js, Jinja2, Mongoose

Frameworks: Flask, Django, React, React Native, Cobra, NextJS, NodeJS, ExpressJS, Expo, Tailwind CSS

Technologies: Git, GitHub, Google Cloud, Firebase, Vercel, Docker, Stripe, Postman, MongoDB, LangChain, Socket.IO
